SUMMARY

Senior Software Engineer with 6+ years shipping enterprise-scale systems at Walmart Global Tech, paired with deep hands-on work in agentic AI, multi-agent orchestration, and LLM-driven content generation through independent projects and consulting. Bridges production engineering rigor with applied AI: designing agent systems that ship, evaluating LLM workflows end-to-end, and turning ambiguous, content-heavy problems into automated pipelines.

EXPERIENCE

Senior Software Engineer · Walmart Global Tech

Sept 2020 – Present · Bentonville, AR

- Drive technical architecture across a returns platform serving 6,500+ Walmart stores nationwide and processing \$500M+ in annual returns volume.
- Shipped the Unified Tire Finder (UTF) initiative, unlocking Auto Care Center returns and enabling \$50M+ in processed transactions.
- Built RxPd pharmacy returns inside a regulated, secure-browser environment, extending the platform into healthcare-adjacent use cases.
- Integrated fraud detection APIs that cut returns fraud ~90% across complex multi-tender, multi-order scenarios.
- Lead cross-team incident response for high-severity production issues, tracing frontend symptoms to upstream service failures and coordinating remediation across engineering teams.
- Own production deployment support, post-incident root-cause documentation, and continuous improvements to release workflow and system reliability.

Software Consultant · Kitestring Technical Services

May 2019 – Sept 2020 · Bentonville, AR

- Optimized returns network to improve transaction performance ~20%.
- Built scalable, API-integrated cloud services; converted to Walmart full-time based on delivery and impact.

INDEPENDENT PROJECTS & APPLIED AI WORK

Brawlux · Founder & Sole Engineer

AI-driven simulated football league powered by multi-agent LLM orchestration · brawlux.com

- Built and operate a live, season-running simulation: 18 teams, custom engine handling rosters, stats, and progression, with autonomous content generation producing articles, recaps, and satirical pieces from structured game data.
- Designed a multi-agent content pipeline coordinating specialized LLM agents for generation, voice consistency, and editorial review across an evolving lore corpus.
- Built the Embercrown meta-rule engine: a configurable rule layer that lets each season's champion modify game logic for future seasons, exercising structured generation and rule-grounded LLM outputs.

- Solo-owned end-to-end on Next.js: agent architecture, evals, prompt design, brand identity, lore bible, and content pipeline from sim event to published post.

Neon Pine LLC · Founder

Independent AI consulting practice · neonpineai.com

- Operate a registered AR LLC delivering productized AI services to NWA businesses: lead-response automation, AI-assisted quote drafting, and review/reputation management workflows for trades-adjacent verticals.
- Scope, design, and ship agentic workflows and LLM integrations focused on practical automation that non-technical operators can adopt and own.

LLM Knowledge Assistant · Personal Infrastructure

- Designed and deployed a secure LLM-based knowledge assistant on Ollama-backed local infrastructure; handled model evaluation, prompt optimization, and performance tuning for production-style workflows.

Lights Out · Mobile Game

github.com/szincone

- Flutter/Dart implementation of the classic puzzle with procedurally generated levels, menu navigation, and in-game animations.

SKILLS

AI / Agents: Multi-agent orchestration, LLM-driven content generation, structured generation, agent evals, prompt engineering, Anthropic SDK, LLM deployment (Ollama)

Languages: JavaScript, TypeScript, Python, Java, Dart

Frontend: Next.js, React, Angular, AngularJS, Flutter

Backend: Node.js, microservices, REST APIs, distributed systems

Cloud & Infra: GCP, Docker

EDUCATION & CERTIFICATIONS

- Full-Stack Web Development, Lambda School (now BloomTech), 2019
- B.A., Secondary Education, Adams State University
- Google IT Professional Support Certificate
